

SURVEY

Surveying, onshore and offshore is a service that the company offers. Our experienced and qualified staff are able to survey and assess even the most complex of jobs. Surveys are carried out with a safety first approach with risk assessments produced if required.

DESIGN

Working with state-of-the-art CAD workstation and utilising the latest Autodesk software, our design draughting team creates drawings for fabrication. Calculations are produced by our engineers using STAAD Analysis and MathCAD software.

MANUFACTURE

Manufacturing is one of our main services. Steel fabrications and GRP products are created from detailed drawings provided by the draughting team. All manufacturing is subject to quality control by the Project Management team.

INSTALLATION

Transportation and installation is where the fully designed product reaches its goal. Our experienced members of staff set the highest of standards when completing installation which are then passed to our clients with a professional finish to each project.
